LibreOffice RefCard

LibreOffice Basic IDF

v. 1.04 - 10/09/2018

Written using LibreOffice v. 5.3.3 - Platform: All

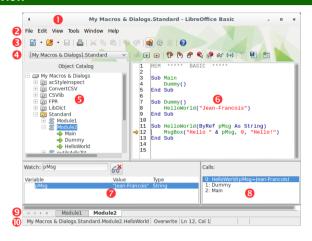

IDE: Integrated development environment.

A set of tools for writing and debugging your macros code.

Getting To The IDE

Menu Tools > Macros > Organize macros > LibreOffice Basic (Alt + F11) then select the desired module to edit (Edit button).

Overview

The IDE window is made of 10 tools, most of them are described in this refcard.

Title bar Name of the container and of the current library. Menu Bar Standard LibreOffice menus, dedicated to macros management. The LibreOffice Standard toolbar, showing only tools Standard toolbar

dedicated to code edition and debugging. Tools dedicated to code edition and debugging.

Object catalog Containers tree-view showing libraries, modules and

6 Code editor Main area for code edition, with syntax highlighting, breakpoints management and execution control.

Watch pane Variable contents checking (watches).

Call stack panel Subprogram calls and their parameters Tab bar Lists and manages the current library modules. Status bar Run-time status.

The main panels (Catalog 6, Editor 6, Watches 0 and Call stack 8) can be detached.

F6 swaps from a tool to the next one

Toolbars

Macros toolbar

If not visible: View > Toolbars.

Standard Toolbar

Two toolbuttons are of interest: Select macro

Calls the macro selection dialog. Modules Calls the Macros Organizer dialog

Macros Toolbar

Library selector Selection of the library to use. Syntax checking. « Compile »

Run the subprogram under the Run immediately

cursor.

Stop Maj + F5 Stop the running program. Step-by-step execution, bypassing Maj + F8

the called. Step into the called subprogram.

Step Into F8 Step Out Step out to the caller. Ctrl + Maj + F8

Breakpoint On/off (De)activate the breakpoint on F9 current line.

Opens the breakpoints dialog. Manage Breakpoints Adds the selected var to the Enable Watch

(Find Parenthesis Import Basic Import a macro source code.

Save the source code (macro or Export Basic dialog) Import Dialog Import a dialog source code.

Dialog Toolbar

This toolbar takes place of the Macros toolbar when editing dialog boxes.

Same contents as the controls toolbar (below). Insert Controls Import a dialog box source code. Import Dialog **Export Dialog** Export a dialog box source code. The files have a .xdl extension (XML).

Controls Toolbar

This toolbar is shown when in dialog box conception mode. It displays each available control to place on a dialog. These three buttons deserve an explanation:

Select Element Get back to selection mode. Multilingual dialog creation. Manage Language

Mark Preview Dialog Dialog test mode (hit Esc to get back to edition mode).

Object Catalog

Displays the 3 containers types and their contents: libraries, modules and macros. Containers (

My Macros & Dialogs

Specific to the user's account, for all documents. Can only be used by the user.

LibreOffice Macros & Dialogs

(aka global macros)

These macros are stored within the LibreOffice global container. As such, they can be viewed and used everywhere.

The ones on the capture are part of a standard LibreOffice install.

Untitled 1 (in the example)

In the current document.

Libraries

Loaded (colored) or not (grayed-out) .

Standard Library

Apart from global libraries, each container comes with a Standard library.

Standard is always loaded at opening time (of the application or the document): It can't be deleted.

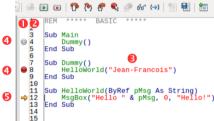

It can't be overwritten through some code import.

It can't be encrypted Modules @

Subprograms (macros) 6

Code Editor

Used for code writing (with syntax highlighting) and debugging (read on).

Helps writing Basic code. Supports syntax highlighting.

Useful Items In the Edition Panel

Gutter A "margin" in which the breakpoints 4 and the execution flag are displayed. Line numbers For easier navigation (toggled using View > Line Numbers).

Editor

(Un)Indenting lines Press Tab / Maj + Tab to indent/unindent lines of code.

These commands can be used when selecting a set of lines. **Syntax Highlighting**

The colors used are specified in LibreOffice options: Tools > Options > LibreOffice > Application Colors. Check the Basic Syntax Highlighting section values

Displaying/hiding line numbers

Toggle line numbers display with View > Line Numbers.

- You may add a button to the Macros toolbar (see Category BASIC).
- Breakpoint management and execution control: see Debugging.

Goto Line

Ctrl + L

Watches Panel

Allows checking variable contents at runtime (more in **Debugging** below).

Three columns (adjustable widths):

· Variable name

Value

Type

Adding A Watch

1. In the code, select the variable to observe (you may enter its name in the Watch zone),

Watch: pMsq

2. click the Enable Watch button 60' F7

Removing A Watch

1. Select the watch to remove,

2. click Remove Watch & (in the Watches panel)

Call Stack Panel

In step-by-step execution mode, allows to know the successive subprograms calls.

Read it bottom-up. All subprograms are listed along with their parameter values.

Subprogram 0 is the one in which the execution is currently. The others are numbered subsequently.

63

Value

Tab Bar

Displays the modules names for the current library. Modules names are shown in alphabetical order, left

Right-click on the bar to manage the modules:

Create a new code module (defaults to ModuleN). Insert > Basic Module Create a new dialog module (defaults to DialogN). Insert > Basic Dialog

Delete the selected module Delete Rename the selected module. Rename Temporarily hide the selected module. Hide

Modules Calls the Macro Organizer

Status Bar

From let to right:

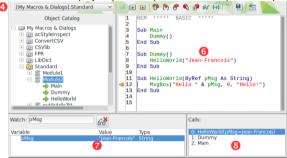

- The subprogram full name in which the cursor currently sits
- The current code edition mode (switch to Overwrite using Ins.)
- The line (Ln) and column (CoI) (character) number where the cursor currently is.

Debugging

Debugging: checking a program execution.

This operation is realized executing the program part to be checked in step-by-step mode while watching the execution context (variables values)

Debugging uses three panels: code editor 6, call stack 1 and watch pane 8. It runs under the control of the three step-by-step buttons (Macros toolbar 4) and breakpoints.

Execution Modes

Stop F5

Five buttons define the way the code is run. The \Rightarrow mark displays the execution point.

Note that when you start execution (any mode) while the cursor is in a subprogram that requires non-optional parameters, you get an error message: Argument is not optional. Run Maj + F5 Runs the subprogram where the cursor sits. The ex-

ecution stops at breakpoints only.

Stops the execution. Step-by-step execution without entering the subpro-

grams. Step in subprograms.

Step out to callers.

Managing Breakpoints

Step Over Maj + F8

Step Into E8

Breakpoint: a mark where the execution is paused. This allows to examine the execution context at that moment (watches values).

Execution is paused before executing the marked line.

The actions below may be accomplished during a debugging session.

Adding A Breakpoint

Double-click in the gutter on the line to stop at when no breakpoint exists (F9)

Deleting A Breakpoint

Double-click in the gutter on an existing breakpoint

(E9)

Disabling/Re-enabling A Breakpoint

Right-click in the gutter on any existing breakpoint, then disable Active. The icon turns from @ (active) to @ (inactive).

Breakpoints Manager

Call it by

right-clicking the execution mark or any existing breakpoint, option Properties

clicking the Manage Breakpoints button

Top to bottom:

(list and edition area) Line numbers where breakpoints are set.

Select or create a new one.

(Un)Check to (de)activate the selected breakpoint. Active **Pass Count** Activates a breakpoint after a given number of passes. New Click to add a new breakpoint on the specified line.

Deletes the selected breakpoint.

Options

Autocorrection

LibreOffice offers a set of IDE options in Tools > Options > LibreOffice > Basic IDE

These options are available after having checked the Enable experimental features in Tools > Options > LibreOffice > Advanced

Enable code completion The IDE automatically completes the Basic objects methods

Doesn't apply to custom objects.

The UseExtended types option must be enabled.

Autoclose quotes Autoclose parenthesis

Fixes keywords and variable names syntax. When typing " (double quote), the IDE adds the closing quote. When typing ((parenthesis), the IDE adds the closing parenthe-

When typing Sub Xxx or Function Xxx (Sub or Function decla-Autoclose procedures ration), the IDE adds an End Sub or End Function.

UseExtended types

(needed to get code completion)

Allows using UNO object types as valid for Basic

Hints

Copying A Library Between Containers

- 1. Open the source document/container,
- Open the Macro Organizer (墨), Libraries tab,
- Select the library Location,
- 4. Export > Export as Basic library
- 5. Open the target document/container,
- 6. Import.

Copying Modules From A Library To Another

(in the same document or between documents/containers)

- 1. Open both source and target documents/containers,
- Open the Macro Organizer (),
- Drag/drop from source to target
 - By default, modules are **moved**. To copy: **Ctrl** + drag/drop.

Hiding Modules

Allows to (temporarily) simplify the tab row: right-click a tab then > Hide.

Encrypting Libraries

Encrypting a library makes a more secure code

- Any library may be encrypted, except Standard
- Open the Macro Organizer (

), Libraries tab,
- Select the Location,
- 3. Select the library,
- 4. Click Password,
- 5. Enter the New password and confirm,
- 6. Validate

Warning! The encryption is **very** strong (AES): **password loss is irremediable!**

Always keep a non-encrypted version for yourself.

IDE Keyboard Shortcuts

Macros dialog Goto line Add/remove breakpoint Activate a watch Immediate execution

Stop execution Step Over Step Into Step Out Switch IDE tool

Credits

Author: Jean-François Nifenecker - jean-francois.nifenecker@laposte.net

We are like dwarves perched on the shoulders of giants, and thus we are able to see more and farther than the latter. And this is not at all because of the acuteness of our sight or the stature of our body, but because we are carried aloft and elevated by the magnitude of the giants (Bernard de Chartres [attr.])
